

NBC Haversack Mark II

The NBC Haversack Mk II is container for storing the NBC Respirator, NBC Canister (2 nos.), Personal Decontamination kit, medical items & chemical detector paper booklet in the compartments provided.

The outer shell fabric is made of a blend of fibre, para-aramid fibre and antistatic Fibre. The combination of fabric ensures the protection capabilities of the outer shell fabric.

Filter fabric of the NBC suit permeable is a laminate of lining fabric, an adsorption layer of Activated Carbon Sphere (ACS) and a non-woven covering layer. Filter fabric provides continuous protection for a period of more than 24 hours against mustard agent.

NBC haversack is in the form of a rectangular bag with a flap to encase the stored items. The rectangular bag has dedicated compartments to secure the contents.

NBC haversack is provided with a tape of sufficient length containing a buckle for wearing the haversack around the neck of the wearer.

All the raw edges of the NBC haversack are over-locked to prevent the fraying of the raw edges.

➤ **Received ToT Absorption Certificate.**
